Real-time Systems with Spark Streaming and Kafka

Your employee wants to purchase my Real-time Systems with Spark Streaming and Kafka class and have it reimbursed. This will make them successful on real-time Big Data projects. I want to answer your questions about why this is right for your company and the employee.

How do you know if this course really works?

This course already runs at companies, including Fortune 100 companies and Strata conferences. It has taken teams of developers and taught them the real-time skills and technologies they need to be successful.

What are your guarantees?

I stand behind this course 100%. I want you to love this course 100% percent too. If you don't love this course, I'll give you 100% of your money back, no matter how deep you are in the course. if you don't love this course within 60 days, I insist that you get 100% of your money back.

What about this other Big Data training from company X?

There are various sources out there for Big Data training. There is a vast difference in quality, veracity, and teaching out there. The majority of them are on the lower end of quality. Purchasing a low quality course isn't just a waste of money; it's a waste of the employee's and company's time. Quality training is the difference between a successful project and a failure.

I'm recognized within the industry as having the best curriculum and training for Big Data. This course is normally taught for large groups of people and isn't economically feasible for individuals. This online course gives your employee access to my world-class materials and training for a fraction of the cost.

Thank you for reading and I really appreciate you reimbursing your employee's desire to learn real-time Big Data and data engineering.
